TravelEase – Travel & Tour Booking System

PROJECT PROPOSAL

Student Name:	Mubariz Hameed
Roll Number:	F23BINFT1E02128
Department:	Information Technology
University:	Islamia University of Bahawalpur
Supervisor:	Sir Rana Nazeer

1. Introduction

TravelEase is a web-based travel and tourism management system designed to simplify how users plan and book their trips online. It allows travelers to explore destinations, view tour packages, and book trips seamlessly, while enabling travel agencies to manage bookings, customer data, and tour details efficiently. The system focuses on delivering a user-friendly, responsive, and modern experience using a full-stack web technology environment.

2. Problem Statement

Travelers often face challenges when planning tours due to:

- Lack of centralized and updated information about destinations.
- Manual booking systems that cause delays and miscommunication.
- Difficulty in comparing tour packages and managing reservations.

Similarly, travel agencies struggle to maintain bookings, packages, and customer records using traditional manual methods.

Hence, there is a need for a centralized, digital, and efficient tour booking platform that bridges the gap between customers and travel agencies.

3. Project Objectives

Objective - Description

Simplify travel booking - Allow users to book tours online in a few clicks.

Manage travel data efficiently - Admin can easily add/edit/remove tour packages and bookings.

Enhance user experience - Use a modern, responsive, and visually attractive frontend.

Provide transparency - Show pricing, itineraries, and destination details clearly.

Support scalability - Ensure the platform can handle multiple users and tours efficiently.

4. Proposed Features

User Features:

■ User Registration & Login (JWT authentication)

■ Browse Destinations and Packages

■ Search by Location or Tour Type

■ View Package Details (price, duration, itinerary, photos)

■ Book Tour Packages Online

■ View and Manage Own Bookings

■ Submit Reviews / Feedback

Admin Features:

■ Admin Login Panel

■ Add, Update, or Delete Tour Packages

■ Manage Bookings and Users

■ View Dashboard Statistics (Optional)

■ Manage Reviews

5. System Architecture / Project Structure

Frontend (React + Tailwind CSS):

- Home Page – Overview, featured destinations
- Tour Listing Page – Shows available packages
- Tour Details Page – Description, itinerary, images
- Booking Page – User booking form
- Login/Register Page – JWT-based authentication
- User Dashboard – View and manage bookings
- Admin Dashboard – Manage packages and bookings

Backend (Node.js + Express.js):

- RESTful APIs for users, tours, and bookings
- Middleware for authentication and access control
- JSON Web Token (JWT) for secure sessions
- API routes for CRUD operations on packages and users

Database (MongoDB) Collections:

- users: name, email, passwordHash, phone, role
- tours: title, location, description, images[], price, duration, itinerary[], dates[]
- bookings: userID, tourID, bookingDate, travelDate, status, paymentStatus
- reviews: userID, tourID, rating, comment, date

6. Tools & Technologies

Category - Technology

Frontend - React, Tailwind CSS

Backend - Node.js, Express.js

Database - MongoDB

Authentication - JWT

Deployment - Vercel (Frontend), Railway (Backend)

Version Control - Git & GitHub

7. Expected Outcomes

- A fully functional travel booking website with a clean and attractive interface.
- Improved efficiency for travel agencies through automated management.
- A responsive web app accessible across devices.
- Ability to extend in the future with payment gateways and maps.

8. Conclusion

TravelEase aims to revolutionize the travel and tourism experience by combining simplicity, accessibility, and technology. The platform provides a reliable and attractive environment for users and travel agencies, making trip planning easier and smarter.
